

MTCM Ltd.

Submarine Cable Installation, Maintenance & Engineering Consultants.

5th December 2001.

To Whom It May Concern:

Mr Raymond Anthony Hatch.

Ray Hatch has been appointed as a member of the deck & cablework team for the cable laying vessel 'Searanger' of Seaworks Ltd for whom I have been Project Manager during the period August 2000 until the present. During this time the vessel has completed several cable lay and burial projects for internationally recognised customers using the SeaStallion2 cable plough system.

Ray has been closely involved with all aspects of deck, cable & plough operations as well as providing complete support to many areas of the vessel activity where his varied and well maintained skills have been an important part in the efficiency and success of the vessel as a cable laying ship and for the flexibility and versatility of the team overall.

Ray is a self motivated and conscientious person with very good personal qualities. He operates very well in trying and demanding circumstances and his great experience in other industries and applications has added another dimension to the team on 'Searanger' of which Ray is undoubtedly a key member.

I have no reservations whatsoever in recommending Ray for any marine, construction or other similar contracting work and would be very pleased indeed to count him amongst the team on future projects that I may be involved with either with Seaworks Ltd or with other clients.

Peter Worrall.
Director.
